History Autodesk was founded by two young artists from Stanford University, Ivan Sutherland and Gary Wiegert. When they left to form a computer graphics consulting company, the company acquired the assets of a proprietary computer graphic system known as the "Nucolor". Autodesk's first product was a desktop CAD system, now known as AutoCAD, which was introduced in December 1982. They released the first commercial version of the application on the Apple II+ as an application program, and a later version, AutoCAD 1982, was available for MS-DOS. In 1986, Autodesk released a massively modified version of AutoCAD called AutoCAD R14.5.2, which is widely considered to be the first commercial version of the program. In the early 1990s, AutoCAD was ported to the Macintosh, and further porting began in 1998 and 1999 for Windows and UNIX platforms. AutoCAD R14.5.2 became known as AutoCAD 2000. On December 1, 1997, Autodesk officially changed the company's name to Autodesk. AutoCAD X11 was the first commercial version of AutoCAD to support the X11 windowing system. On April 1, 2014, Autodesk announced that after 49 years of business and 10 years of continuous innovation, Autodesk has launched Autodesk 360, a cloud-based platform to deliver next-generation product creation. Product timeline Key dates and releases 1982 Autodesk releases AutoCAD, an application which runs on the Apple II+ with a standard Apple II monitor and input devices. 1986 Autodesk releases the massively modified version of AutoCAD called AutoCAD R14.5.2. The R version number indicates it is a revision of AutoCAD. AutoCAD R14.5.2 is the first AutoCAD to have a 32-bit architecture. It is also the first AutoCAD to support a 64-bit CPU architecture. 1989 Autodesk releases AutoCAD R12 for the Macintosh platform. 1990 Autodesk releases AutoCAD R11 for the Macintosh platform. 1991 Autodesk releases AutoCAD R10 for the Macintosh platform. 1992 Autodesk releases AutoCAD R8 for the Macintosh platform. 1994 Aut

Nuclei in Cell Death Process in Hippocampus of Rats Injured by Intracerebral Hemorrhage. We investigated the histological changes in the nuclei of hippocampal neurons in rats injured by intracerebral hemorrhage (ICH) using terminal deoxynucleotidyl transferase-mediated dUTP-digoxigenin nick end labeling (TUNEL). One day after ICH, nuclear fragmentation was noted in the CA1 and CA3 subfields of the hippocampus. The number of apoptotic cells in the ipsilateral cortex was significantly greater than in the sham-operated group on the seventh day after ICH. Some of the apoptotic nuclei displayed condensed chromatin. These results indicated that there was an early apoptotic response in the hippocampal neurons after ICH. Production of storage lipoproteins in pregnant sheep and the effect of progesterone and ACTH. Pregnant sheep were used to study the production of HDL and VLDL and the effect of progesterone on these lipoprotein classes. Plasma progesterone concentrations increased during gestation, reaching values of about 300 ng/ml around day 80. At the same time, a decrease in the plasma concentration of cholesterol and in the ratio of LDL to HDL was observed. Plasma triglyceride and phospholipid concentrations remained unchanged. VLDL and HDL were isolated from plasma after precipitation with dextran sulphate and phenyl-Sepharose. VLDL and HDL concentrations increased in a similar manner during the last half of gestation. Addition of progesterone to the incubation medium did not influence the rate of production of VLDL or HDL in sheep that had previously received a hormone implant. The main difference between these results and those previously obtained in the rat was that progesterone increased the synthesis of VLDL. A small fraction (about 3%) of HDL was esterified and separated from the rest of the particles by gel filtration.
