On April 21, 2007, Autodesk was acquired by its former parent company, The 3D Realms Corporation, in a \$382 million transaction. At the time of the acquisition, Autodesk estimated the post-tax earnings of Autodesk's new owner at \$234 million, and a share price of \$28.98. The acquisition increased Autodesk's market capitalization from approximately \$1.7 billion to approximately \$3.3 billion. The acquisition closed on June 5, 2007. It was announced in October 2011 that Autodesk would be acquired by Chinese real estate firm, Ryll, in a deal worth \$4.05 billion, in an attempt to build a more modern, enterprise focused company. History Autodesk was founded by Larry Tesler, Steve Roper, and Armin Rigo on March 21, 1982, as Teslar Systems. Teslar Systems created the first product, AutoLISP (Automatic Programming Language for Windows), in 1985. This programming language allowed users to create their own programs in the form of interpreted Windows functions. From here, Teslar Systems grew to add a variety of software and hardware products for the PC, including software development tools, CAD and CAE applications, 3D animation applications, and 3D viewing software, providing training, reselling and consulting services, and even providing 3D printers for schools. At the dawn of the 1990s, Teslar Systems sold AutoCAD (originally named Polytran), its CAD and CAE product, to a consortium of eight software companies. As part of the deal, Teslar Systems retained a 10% stake in the business. Teslar Systems received \$11 million and three years of royalties for each AutoCAD license. In the early 1990s, Autodesk's software engineers, programmers, and software developers began to work on software for the New Generation System (NGS), which would use cutting-edge technology to run Autodesk's CAD applications. The new CAD software was based on the existing CAE application (AutoCAD), which was already being used in the industry. The NGS would be named AutoCAD and introduced in 1993. Autodesk became an independent software company in 1993. Two years later, Autodesk introduced the first version of AutoCAD. At the time, the program had a distinctive look and feel. Autodesk's new business strategy included a focus on a1d647c40b
