Mobile XLS 2.1.1.0 Mobile XLS is an extensive application designed to ease and speed up the loading and output of Excel documents. Mobile XLS does not rewrite the spreadsheet, unlike other utilities of this kind, which can cause conflicts with other instances of the same Excel file. All changes are applied on-the-fly, without a need to save your changes beforehand, and it is quite easy to use. The application comes with a lot of templates, so you can begin using it immediately and, after a while, customize your work as you wish. With its help, you can easily work with large spreadsheets, as well as with spreadsheets containing hundreds of cells. A feature that separates Mobile XLS from similar tools is its Built-in Pre-Defined Formulas. With these formulas, you can take advantage of Excel files and apply them to another kind of data. This new feature makes Mobile XLS one of the few utilities that can be used in conjunction with applications as diverse as MS Access, MySQL, HTML and PDF. You can use the

spreadsheet to perform statistical analysis, as well as to generate graphs, reports and charts. Apart from data, it can also include formulas, styles, shapes, and image data as well. Mobile XLS can save files in several formats, including XLS, CSV, HTML, MySQL, Access, Excel, XML, HTV, XML, Autodesk Architectural CAD and Architectural BIM. The way Mobile XLS handles file sizes is quite interesting. In fact, all output files are sent in a single batch of data, but only a small part of this data is written to the file, and you can easily keep working on the spreadsheet. Due to this, the application doesn't stop after an error, but continues working on the file until the last cell has been updated, as well as uploading new, untouched data to the template. The program can save its work in a secure way, so you can work on a particular project without worrying about losing all the changes made.
