Uninstall unwanted programs easily with ease. Clean up your computer faster than ever. Hide all the programs you don't want to see anymore. The program is bundled with a database that will help you to identify all installed programs. The program analyzes your system, and lists all installed software and their names, versions and publishers. The list of installed programs can be sorted according to name, publisher, version or URL. Programs can be easily removed from your computer. Programs can be easily found, or if you don't remember their name, you can try the Search function. You can view the file extensions of each program, and even add the name of an exe file to a list of unnecessary software. Hide unused and unwanted files from Windows Explorer - without deleting or moving them. Yeabbit Uninstaller is a software tool that provides users with a simple means of uninstalling programs from your hard drive and comes bundled with a clean interface. Simple setup and clear-cut GUI The installation process is a piece of cake, as it does not offer to download any products that are not actually necessary for the program to fully function and it does not last longer than a few moments. After you complete it, you are met with an interface which can only be described as minimal, as it includes very little elements. As a result, although no Help contents are provided, it becomes pretty clear that all types of users can find their way around it, without running into issues. Options you can take advantage of This utility detects all the programs installed on your machine, and displays them in the main window, as a list, along with details such as name, publisher, version and URL. This list can be sorted according to name or URL. In addition to that, a search function is incorporated, so that you can find a particular item faster. The list can be refreshed with a click of the button, while it is also possible to open the containing directory, and view the corresponding entry in the Registry Editor. No other notable options are built-in. Performance and conclusion CPU and memory usage is low to moderate, as it fluctuated according to the process under way. The interface is intuitive, the response time is pretty good and our tests did not reveal any errors, crashes or freezes. However, you should know it lacks some options other similar applications enclose, such as batch processing and removing left
