Since then, AutoCAD has become one of the most popular software applications in the world, and has been upgraded and updated numerous times. This article explains the AutoCAD history and shows how to use it as a project manager, architectural designer, landscape designer, city planner, and civil engineer. History of AutoCAD This section explains the history of AutoCAD. Autodesk Autodesk Inc. was founded in 1982 as a spin-off of General Electric (GE). Its first product was a CAD/CAM software program called AutoCAD. AutoCAD ran on microcomputers that had a video display with a graphics chip. This was the first commercial CAD program available on the desktop and was similar to the drafting programs that had previously been used on mainframe computers or minicomputers. Although it was marketed as a CAD program, it was actually a drafting program, which was very popular in the pre-AutoCAD era. The first AutoCAD user was Virginia Sanders from GE's electrical engineering department. Sanders started to develop AutoCAD in November 1980 as a private application. She

hired a few of her friends to test the program and recruited about 150 people to use it.

In December 1981, GE introduced AutoCAD for personal use. In 1982, Autodesk was officially founded and Sanders transferred her rights to Autodesk. Autodesk then released AutoCAD 1.0, which ran on a microcomputer with a graphics controller called the MV/C. The program had only one drawing area, a single axis of movement, and no commands or tools. Drawing objects were fixed to the coordinates of the drawing area. The user interface was very simple and was similar to a watch. AutoCAD 1.1 was released in April 1983. It added commands, parameters, and other tools to make the program easier to use. It also allowed the user to draw objects with complex shapes. By the time AutoCAD 1.1 was released, the most popular CAD

In response to a question on how she would change America, the Democratic Socialist told Kelly, "I would love to be in this country where [white nationalists] felt the full force of the law when they engage in violence and threats of

violence against people who are simply exercising their 1st amendment rights. That is not where we live in the United States of America today." The host wasn't buying it.

"Is that not the same thing as saying, 'That's ok, go out and f*ck people up?'" she asked. "No, I think it's pretty different," Ocasio-Cortez responded, before claiming that the question was "unfair" because she was talking about violence — and violence toward police — when she used the word "people." "The fact that it's people in general and police in particular is very different than threatening a person and targeting them," she added. Kelly's a1d647c40b
