It's always a good idea to regularly back up your data to a cloud service, like Google Drive or Dropbox, or keep a local hard drive back ups. In

this guide, we'll teach you how to optimize your computer to speed up your hard drive so that you can free up space on your drive. Step 3: Check the hardware Your hard drive is the most important part of your computer. It is made up of multiple file systems and it is where all your data is stored. Over time, as you use your computer, the files on your hard drive expand and become sluggish. This means that it's not always possible to remove all the extra data, but you can make your hard drive run faster by: Optimizing the file system Optimizing the hard drive You can also work towards cleaning up your computer by performing various optimizations tasks. All of these are typically performed in the settings section of your computer, but you can also use third-party programs. The file system is the hard drive's internal data storage area. The file system holds the file-structure for your storage and contains the operating system and applications b7e8fdf5c8
