AI isn't a guarantee of a good experience, but a good and smart AI provides realistic companionship. Keep it going in the direction of being interactive, not static, and with some sort of innovation on top. An interesting idea to explore: [~~~ mauricio-OH Thanks for the feedback! Predicting future metabolic risk in adults: Do BMI and waist circumference have the same predictive value? The World Health Organization (WHO) guidelines suggest the use of anthropometric indices in predicting the future risk of developing cardiovascular disease. The aim of this study was to assess the ability of BMI, waist circumference (WC) and hip circumference (Hip) to predict future metabolic risk in a Chilean population. A cohort of 285 apparently healthy volunteers, belonging to a primary health care center in the Chilean capital Santiago, was enrolled in this study.

Those individuals (male: 158, female: 127) who at the baseline examination were free from metabolic disease were re-evaluated after 5 years, on the basis of Framingham criteria, to evaluate the ability of BMI, WC and Hip to predict future risk. The c-statistic value of BMI to predict future metabolic risk was similar to WC (0.64 [95% CI 0.59-0.70] vs. 0.63 [95% CI 0.58-0.70], respectively, $p = 0.410$) and was higher than that of Hip (0.64 [95% CI 0.59-0.70] vs. 0.57 [95% CI 0.51-0.62], $p = 0.087$). The following cut-points of BMI for waist circumference, and waist/height ratio (0.71 and 0.74) and Hip circumference (0.70 and 0.70) predicted future metabolic risk with greater accuracy (using c-statistic) than those that the WHO (0.65 and 0.70) and National Cholesterol Education Program Adult Treatment

This fact represents a major concern for every citizen since for many people access to public health and medical services has the immediate implication of purchasing enough food in the shortest period. The extreme urgency of the situation to save the human lives caused by pandemic requires to make the public aware of the problem and of the solutions at hand. This is the aim of a new podcast based on a pan-European

scientific committee expertise which I did with a friend. The podcast is about fighting Covid-19 through nutrition and exercise. A “virtual-in vivo” alternative that helps avoid the spread of the coronavirus.

ABOUT ME Hi! I'm a single mum of one and I'm a little obsessed with cooking (oh boy, can I be any more redundant right?). I used to be a full time graphic designer, now I'm writing all day whilst my daughter has her nose in her book, playing with her dolls, or watching her favourite TV shows.

Thursday, 4 May 2015 One of my new favourite cookery books, if you don't already know, is called *The Happy Healthy Cook* by Clare, a fun entertaining cook book filled with family recipes that can be enjoyed throughout the day, evening and can be given as gifts. I was introduced to this cook book by Mark who liked the double page spreads a lot, so that made me want to get my own copy. I already have three other 'fun' cook books: *The Good Cook, Ready to Eat* by Jilly and Rebecca, and *Simply Food* by Nicky and John. One of the pages in *The Happy Healthy Cookbook* caught my eye for a very particular reason. It is a picture of a chicken and avocado sandwich that I just had to make, and I have to say, it really is a good sandwich. I can't wait to make this. I love the photos of the sandwiches. I could eat this every day. This is a very simple recipe so can be made in no time and

More About jksExportKey Almost all the keys that are imported from the keystore are of type RSA and are password protected. The only exception is of the key generated by the CKeyStoreApplication subclass of Java Keystore classes that uses an internal keystore. This key type is not password protected. The application extracts the password for the specified key. Alternatively, the application can prompt for the specified password if a password is not specified in the command line. The exported private key or a certificate is extracted from the key store file by default. However, you can also export the specified public key or certificate by specifying -exportpublic in the command line. The application also allows you to view the password hash for the specified key. In addition, the application allows you to print the details of the public key exported by the application. All you have to do is to specify the input file or the folder where the file is located and then specify the password on the command line. JksExportKey Usage The application can be used in command line mode by specifying the input file that is of format JavaKeyStore. By specifying the input file and the password, the application attempts to export the specified key from the key store file. The software shows the password dialog if a specified password is not specified on the command line. Alternatively, you can export the specified key from the key store by specifying the key value on the command line. jksExportKey Command Line Syntax In the following table, you can find details of the required parameters used in the application for exporting keys. You can also download a video demonstration of jksExportKey. Command Line Parameters Description -input Specifies the path where the keystore file is located. The file can also be specified using the folder where the file is located. -password Specifies the password used to export the key. Note that the application prompts for the password for the specified key. If no password is specified on the command line, the application extracts the password for the specified key. -output Specifies the location where the exported key or certificates is stored. It is the default behavior of the application to save the exported key or certificates in the same folder where the keystore file is located. You can however, override the default behavior and specify a different output location on the command line. The software displays an error
