Timis is an application that allows you to control the power consumption of your computer by controlling the internal fan and using hardware monitoring. It allows you to select the mode (standby, idle or power saving) from the "Power" tab when setting your preferences. Also, it allows you to control the power consumption using the "Fan Speed" tab and "Hardware Monitoring" tab. Every option can be changed from the "Preferences" tab. This is the simplest software you'll ever find and you don't need any installation or any other third party programs.

Timis Description:

- Set the power mode (standby, idle or power saving)
- Set the fan speed
- Select to use ambient temperature or temperature sensor
- Get the current power consumption in Watts
- Control the power consumption by adjusting the fan speed
- Get the current temperature in Celsius
- Adjust temperature with the ambient temperature
- Get the current Rpm with the fan speed
- Adjust the fans with the max and min RPM
- Get the current watt
- Get a long/short power estimate in Watt
- Get a long/short power estimate in Ampere
- Get the power in Watt by simulating the fan speed
- Get the Power consumption in Watt
- Get the Power consumption in Ampere
- Get the power in W in the value ID
- Get the power in W in the value ID
- Get the power in Watt by
