Table of Contents Should you use Photoshop Elements to edit images? You can use Photoshop

Elements to edit images, including RAW images, but you must use Adobe Photoshop to edit RAW images. Elements is not a RAW editor. RAW images are uncompressed, meaning Photoshop Elements can't open them. Elements is still a great program. Adobe does a great job of supporting it. The biggest problem with Photoshop Elements is that it doesn't come with a 32-bit version of Photoshop. So, if you don't need 32-bit, or want to save money on your computer, you can still use Photoshop Elements. You can also use Photoshop Elements to edit high-quality JPEG and TIFF images, but you're not able to edit RAW images with the program. Why Adobe Photoshop? Adobe Photoshop is the preferred program for most professional photographers and graphic designers. Photoshop is the most complex software program on the market and is available on Windows, macOS and Linux. Photoshop has more features than Photoshop Elements, but it has also become bloated with features over the years. Since the introduction of Photoshop CS6, many of the most commonly

used features have been introduced to every other version of the software. For example, the Content-Aware Scale feature in Photoshop CS6 was introduced to Photoshop CS5, Photoshop CS4 and Photoshop CS3. In Elements, Adobe has kept up with new features over the years but never removed features from the program. They created Photoshop Elements rather than Photoshop X or Pixel-Perfect. Adobe Photoshop is the most advanced and most popular software editing program, even though Photoshop Elements is a popular and advanced tool for hobbyist and professional photographers. 05a79cecff

1. Field of the Invention This invention relates to a universal strap connecting device comprising an attachment member and a clip member, to be fitted and fixed to an attachment member on an outer circumference of an object to be attached and connected by a loop of a first webbing, for example. The invention also relates to a safety system using such a strap connecting device.

2. Description of the Related Art FIG. 2 shows a conventional strap connecting device of the kind referred to above. An attachment member 1 and a clip member 2 are formed with mutual engaging grooves 1a and 2a on inner circumferences thereof. A strap 3 is passed through the insertion hole in the attachment member 1, and engaged with the grooves 1a and 2a. The clasped strap 3 as mentioned above is fitted and fixed to an object 4 to be attached and connected. In that case, when a webbing 5 is inserted into a loop of the strap 3 and

pulled in a desired direction, the strap 3 is tightened at the same time, and the object 4 is thereby held. FIG. 3 shows a conventional safety system using such a strap connecting device. A webbing 6 is wound in a desired fashion into the strap 3 of a connecting device as shown in FIG. 2. The webbing 6 is pulled in a direction shown by an arrow mark in FIG. 3 to tighten the strap 3, and thus an object 4 to be attached and connected is attached and connected to the strap 3. However, it is usually the case that the strap 3 is not pulled in the same direction as the webbing 6 when the webbing 6 is pulled in the direction shown by the arrow mark. In that case, a point at which the webbing 6 is tightened by the strap 3 moves on a circumference of the object 4 to be attached and connected. As a result, the object 4 cannot always be attached and connected to the same position. The invention is developed to eliminate the above-mentioned drawbacks, and it is an object of the invention to provide a strap connecting device of the kind wherein an object can always be attached and

connected to the same position. In order to achieve the above object, the invention provides a universal strap connecting device comprising an attachment member and a clip member to be fitted and fixed to an outer circumference of an object to be attached and connected by a loop of a first webbing, wherein the clip member is formed in a ring shape, with one of end portions of the clip member being slit in
