Specifically, Adobe Photoshop is used to manipulate photographs and graphics, create logos and other imagery, and create user-friendly advertising, signs, banners, flyers, business cards and more. It can also create images from scanned photographs, drawings, images from websites and other sources. But Photoshop can be a powerful tool for even advanced users. In this part of our Advanced Photoshop Expert's tutorial series, we'll teach you about Photoshop's advanced tools, including the one that's essential to just about every Adobe Photoshop project: the Brush. Adobe Photoshop's Brush Tool While the regular paintbrush is effective for most painting and

retouching projects, Photoshop has a few other tools that can dramatically increase the effectiveness of your work. Here's a look at the Photoshop Brush. Using the Brush Photoshop's Brush Tool is a multitool, meaning you can use it for more than one function. The Brush Tool has several features that let you use it for texturing as well as painting. You can use it to add textures, blend strokes, create textures from scratch, paint details and more. The Brush Tool's size controls allow you to change the size of your paint brush strokes. You can adjust the size of a brush with the left and right arrow keys on your keyboard or with the Use Tool Options button on your keyboard. The Brush Tool's size isn't the only option that allows you to change

the size of a brush. The Adaptive Size feature allows you to increase or decrease the size of your brush stroke size just by moving the Brush Tool cursor. The main cursor controls include the Brush Tool's horizontal and vertical size. For more detail on how to use the Brush Tool, including the Adaptive Size feature, watch our video tutorials on using the Brush Tool. You can adjust the size of the brush by moving the brush and hold the Alt/Option key down as you move the mouse so that brush size increases. You can use the Brush Tool to create a texture in Photoshop, but you don't have to. The brush is also ideal for coloring and adding details to any image. The Brush Tool is also useful for creating soft, even strokes of paint that do not apply paint to areas that have been

painted with other brushes.

Creating a Texture You can use the Brush Tool to create a texture for any image. One of the most common uses for the Brush Tool is to add a texture, with the Brush Tool in a large size

Bilateral recurrent optic disc pits and vitreous hemorrhage in a patient with sarcoidosis. A 58-year-old woman with sarcoidosis presented with blurred vision in her left eye. Serial B-scan ultrasonography revealed that the optic disc pit was enlarged bilaterally. After high-dose steroid therapy, the optically dense vitreous hemorrhage in the left eye regressed. The conjunctival hyperemia and opacity in the vitreous bodies in the left eye gradually improved. However, two additional vitreous hemorrhages developed in the right eye. The optic disc pits and the vitreous hemorrhages were smaller in the right eye than in the left eye. The conjunctival

hyperemia and opacity in the right eye recovered after treatment with a low-dose steroid for 6 months. Because sarcoidosis is a systemic inflammatory disease, systemic steroid therapy may have had a positive effect on the bilateral recurrent optic disc pits. Proteomics techniques to characterize oral cancer cells. Comparative two-dimensional electrophoresis of [35S]Methionine-labeled oral cancer cells and normal controls has demonstrated that specific proteins were expressed at different levels. These proteins represent a subset of the proteins present within tumor cells compared to normal tissues. Further analysis of these proteins has demonstrated that several are expressed primarily at the invasive front of the tumor, where

neoplastic cells are most likely to invade normal host tissue.

Analysis of known proteins of interest has proven useful in evaluating novel proteins whose distribution pattern among oral cancer cells is unknown. Two-dimensional electrophoresis of radiolabeled oral cells subjected to cell fractionation techniques demonstrated that proteins differentially expressed in normal versus tumor cells were localized primarily to the plasma membrane. Two-dimensional electrophoresis of proteins from the plasma membrane of normal and oral cancer cells has identified several differentially expressed proteins including the epidermal growth factor receptor, the Na⁺, K⁺-ATPase, and the mucin (MUC-1). Interestingly, gastrin, an epidermal growth

factor (EGF)-releasing peptide, was also observed to be differentially expressed among oral cancer cells. These data suggest that gastrin, once released from oral cancer cells, may directly stimulate EGFR through a ligand-receptor interaction, thereby promoting an autocrine growth factor-like pathway. Orlando City B has signed a USL contract with Red Bull Global just hours before it takes on the Harrisburg City Islanders on Wednesday night. The signings should breathe new life into the

club's existence after an extremely disappointing first season in USL, which saw the Lions win just five games, for a total of 11 points and sit last in the East. The 2017 USL champion New York Red Bulls II added a second team to its roster, but Orlando City B was not granted a second team due to its legal agreements with MLS. That decision led to the formation of the hybrid USL-MLS franchise, Austin Bold. The Lions had set their sights on Red Bull Global when owner Flavio Augusto da Silva ran into issues with their USL counterparts. Orlando City B can accept ownership of Red Bull Global USL team, a perfect fit for the club, but USL has decided to appoint another professional affiliate for Orlando City B so there is currently no plan for Orlando City B to merge with Red

Bull Global. The Lions have brought in a few familiar faces in Roberto Mangual and the much-debated Sebastian Dalgaard. Marlon Hairston and Jordan Schweitzer, however, have been the only ones confirmed as signings to date. Mangual, who also served as an assistant coach at Red Bull Global, made the move to Orlando City B a couple of months ago and that was when rumors of an agreement started swirling. The Lions didn't show much interest in the player at the time, but da Silva was aware of the 21-year-old's efforts on the field in 2017 for the Lions' USL club and he convinced the club to bring him in as a player/coach. Dalgaard, who da Silva had coached in England, also took the job as player/coach and he has provided some of the Lions' best

performances so far this season with a volley in Saturday's 1-1 draw against the Pittsburgh Riverhounds. Dalgaard played professional football for the likes of Real Betis in Spain, Strømsgodset in Norway and Sydney FC in Australia before returning to play in the Danish lower leagues. He also played for Herfølge BK in Denmark's first tier in 2009 and he has coached in Denmark and Norway since 2009. The Lions' roster will be very different next season as they will take more young players from
