The pen tool: The most important tool in Photoshop is the Pen tool (Figure 1.1.1). It lets you do precise selections of straight lines and curved lines that are pixel-by-pixel and give you great control over the shapes of the lines. FIGURE 1.1.1 The Pen tool, shown at the top in dashed lines, is important for making precise selections. The Pen tool is used to create selections of areas of the image (in other words, to select individual pixels) or groups of pixels (in other words, to select shapes). You can then transform the selection. You can distort the selection using transformations, as well as resizing, moving, and rotating the selection. The basic Pen tool is somewhat comparable to the paint brush in that you can also click-drag a brush over the image to paint with pixels, although there are differences between the Pen tool and the brush tool. The Free Transform tool: The Free Transform tool (Figure 1.1.2) is used to resize an image.

It has a square as the standard size. You can select an area to resize and drag it to change the size. FIGURE 1.1.2 The Free Transform tool makes resizing an image easy. The Free Transform tool is useful when you don't want to or can't scale an entire image; you just want to change a few pixels. The zoom tool is also important when you're working with the image's pixels. The Image Size tool (Figure 1.1.3) is useful when you want to create a new image size that exceeds the default size. You can also use the Image Size tool to create custom sizes. If you don't enter an exact size, Photoshop creates a uniform canvas for you. The Crop tool (Figure 1.1.4) is used to crop an image. You can crop images by selecting an area to crop out and then dragging the corners. You can also resize a selection and crop an image that has an image size greater than the default size. The Channels dialog box (Figure 1.1.5) enables you to create, combine, and duplicate channels. This enables you to view and manipulate channels in the image as a single image. Use the

Channels dialog box to create layers, or channels, to separate the raster content from its color. The Brush tool (Figure 1.1.6) is used for painting
