Photoshop Elements I can't give you much of a run-down on Photoshop Elements because the features and capabilities are so similar to those of Photoshop. Like Photoshop, it offers layer-based, raster-based, and vector-based editing with the opportunity to save these edits. Elements is a great all-around program for editing photographs, graphics, and other images. If you want to use Photoshop to create a T-shirt design, then Photoshop Elements may be the program for you. Q: How many ways are there to solve the sequence? I am trying to solve the question "The sequence is defined by $a_n \triangleleft \{a_1, a_2, a_3, a_4, a_5, a_6, a_7, a_8, a_9\} = \{1, 2, 3, 4, 5, 6, 7, 8, 9\}$ and $a_{n+1} = 3a_n + 2$ for $n = 1, 2, 3, 4, 5$." I am not able to figure out, how to approach this problem. I tried applying the property of n -ary sequences where n is fixed. But I have not got any useful result. Also I am able to solve the example sequences like $a_n = 3^n + 2$ and $a_n = a_{n-1} + 3$ for which I do not get the same answer that in the sequence $(1, 2, 3, 4, 5, 6, 7, 8, 9)$. Can someone suggest a good approach to solve it? Thank you for your help.

A: $a_n = 3^n + 2 = \left(\frac{3}{2}\right)^{n+1} + \left(\frac{2}{2}\right)^{n+1} = \frac{3^{n+1}}{2} + \frac{2^{n+1}}{2}$ Now 3^{n+1} is divisible by 4 iff n is even, and 3^{n+1} is odd iff n is odd. So if n is even: $a_n = \frac{1}{2}(3^{n/2+2} + 2^{n/2})$ If n is odd: $a_n = \frac{1}{2}(3^{(n-1)/2+2})$ Loughborough cyclist Louise Smail was killed when a car hit her on the railway line outside Leicestershire (Picture: SWNS) A woman was killed in an unprovoked road crash when she was thrown over the bonnet of a car and hit the

Q: using jQuery to hide/show a text field based on a div I have two divs and they both are hidden. I want to use jQuery to show/hide one of the divs if the other div is clicked. I could get this to work with a simple inline onclick attribute, but I want to put this into a script block. I have included jquery.min.js in the head and my JS below that. `$(document).ready(function() { $('#divToHide').click(function(){ $('#divToShow').toggle(); }); $('#divToShow').click(function(){ $('#divToHide').toggle(); }); });` A: Replace the `click()` functions with a single `on()` function, passing in the appropriate handlers to the `on()` function: `$(document).on('click', '#divToHide', function() { $('#divToShow').toggle(); }); $(document).on('click', '#divToShow', function() { $('#divToHide').toggle(); });`
