with a larger pixel size was recognized in both cases of BL1 and BL2. The focus of these experiments is to perform a study of the LAT sensitivity around the second knee energy, which is expected to be an especially important energy range for the gamma-ray detection with the enhanced version of LAT, since the

---

background emission in this energy range is important for a quantitative gamma-ray analysis. However, the results of the BL2 experiment will be presented as well. This experiment is devoted to the development of the fine-grained synchrotron component of the LAT (as well as the ones in other orbit). The purpose is to

---

study the performances of  
the LAT in the region  
around the second knee  
energy and in the high-  
energy part of the  
spectrum with the goal of  
directly comparing them  
with the AGILE satellite  
data. -----
