A: You have used the wrong kind of Query in the 2nd SELECT. Query 2 is supposed to run on the content in the SPORT_MOVIES table. You should have run another SELECT query, which SELECTs from the SPORT_MOVIES table and saves the content of that SELECT result in a temporary table, which then is used as input to the 2nd SELECT in your trigger. Assuming you have a (simple) table: CREATE TABLE demo1 (id int NOT NULL , fname varchar(100) , lname varchar(100) , PRIMARY KEY (id)) ; You can use this Query: SELECT id , fname , lname FROM demo1 INTO #tmpdemo1 ; SELECT * FROM demo1 INTO #tmpdemo2 ; Once you have the data in #tmpdemo2, you can use it as input in a query like this: SELECT fname , lname FROM #tmpdemo2 WHERE fname = 'myfname' AND lname = 'mylname' ; I hope this helps you to understand why this works.
