The Videotrack module for PLC-ANALYZER pro 6 provides time-synchronized video recording with the PLC signal ... Connection USB 2.0 (USB Type-A) / Cable length 1.5 m. Videotrack for PLC-ANALYZER pro 6 allows time synchronized video recording with a PLC signal. Connection USB 2.0 (USB Type-A) / Cable length 1.5 m. Videotrack for PLC-ANALYZER pro 6 provides time synchronized video recording with the PLC signal. The module is designed to connect video recorders (system power supply) to a PLC network. It is connected between the Ethernet interfaces of the device and the Ethernet controller, thus ensuring synchronization of the video data.

Autem Plc Analyzer Pro 5

Autem Plc Analyzer is a software system for logic analysis and recording of data on PLC-controlled facilities. This was on the PLC-ANALYZER pro 5, i.e. via. new BLACKBOX 3 from AUTEM provides an ultra-compact data. It is connected to the PLC by means supported by the PLC-ANALYZER pro 5, i.e. via .Survey of bacteriological examination of farmed eels and sprat in the Spanish National Processing and Marketing Plan for fish and fish products. The farmed eels and sprat and the raw material used in processing for these products, the so-called black sprat, were examined for bacteriological quality. The data obtained were used to assess the microbiological risk related to the processing and marketing of these fish products. The survey was carried out in nine Spanish processing facilities and in eight Spanish processing markets during 2010-11. A total of 723 samples were examined, each containing at least 100 g of sprat, bluefin eels, pike eels, frozen pike eels, frozen quen caught Irish eels, or fresh bluefin eels and 10 g of the undecomposed sprat (used as a raw material in the processing of other fish products). The bacteria quantified in each sample were aerobic psychrotolerant cocci (77.0%), Enterobacteriaceae (8.6%), and aerobic coryneform bacteria (1.6%). Although a total of 22 distinct isolates of presumptive *Vibrio* were recovered, only 15 of them were confirmed as presumptive *Vibrio parahaemolyticus*. The levels of coliforms and *V. parahaemolyticus* confirmed in the farmed eels and sprat in this survey were below the levels reported in other European countries to date. Nevertheless, the products were only partially processed and cooked, and therefore

results obtained in this survey should be considered as indicative of typical data rather than actual risk. It is, therefore, important to further extend the survey to include other samples and other steps in the production process and to evaluate the effect of specific interventions. The field c6a93da74d
