How do you get a heat map like the attached image (gathered from this webpage) when plotting a barplot using ggplot2? A: You can change the color of the bars on top of a geom\_bar plot using scale\_fill\_gradientn and changing the data appropriately. library(ggplot2) ggplot(dat, aes(x = `Log Counts`)) + geom\_col(aes(y = `# Visits`), fill = "grey") + scale\_fill\_gradientn(colours = colorRampPalette(c('#D3D3D3', '#252525', '#00FF00', '#FFF200'))(9)) + theme\_bw() + xlab("Number of Users") + ylab("Number of Media") There are several different options to change the color of the bars; a handy guide for this can be found in the ggplot2 docs. A: If you want to put it in a bar plot, you can use geom\_col instead. It's basically a "transparent" version of geom\_bar. ggplot(dat, aes(x = `Log Counts`)) + geom\_col(aes(y = `# Visits`), fill = "c6a93da74d
